PEOPLE FIRST

## Help your child learn and grow

Like any parent, you want your child to grow up being happy, capable and independent. Naturally, the more they can hear and learn and the better they can communicate, the more successful they will become. And you can contribute by getting them all the tools they need to support the learning process.

Such items include top quality hearing instruments and a reliable FM solution. While hearing instruments make everyday sounds more accessible, FM solutions focus on speech and make listening over distances or in particularly noisy situations – like classrooms - a lot easier.

This brochure tells you how the FM solutions can assist your child.

# Vital access to speech

### Knowing your child can hear at school

Both at home and at school it is not always easy to find out if the child can actually hear you or if the FM system is actually working correctly. FM solutions are made to carry the speaker's voice directly to the child's ears, but if the solution fails to deliver the signal, is tuned in on the wrong channel or breaks down, the room becomes a churning sea of noise. And teachers often have no way of knowing that the connection is lost.

With the Oticon Amigo T20/T21, doubts about performance disappear. A built-in light on the receiver shows that the entire Amigo solution is working correctly. So no matter where the child is sitting, you can be certain that they can hear clearly.

### Helping your child hear better at home

For young hearing instrument users, loud noise can sometimes be just as disturbing at home as it is at school. Wherever the family gets together – whether it's in the car, around the dinner table or in front of the TV - the mixture of voices, and other noises like household appliances can be difficult to decipher. But with the Amigo T10 your child will be able to follow the conversation and easily focus on the voices.

### Portable – and versatile

The T10 is both convenient and versatile. Just as reliable as the T20/T21, this lightweight device can be held in the hand, worn around the neck, placed on a tabletop or plugged into a TV. So your child can confidently take part in the action, whether it's in the classrooms, at home or during social activities.

### With the Amigo at school your child will be able to:

- > Get instant, consistent access to speech.
- > Pay attention in class and learn more easily.
- > Develop good language and communication skills.
- > Develop both socially and academically.

### With the Amigo at home your child will:

- > Feel secure by hearing your voice throughout the home.
- > Gain energy and participate more actively in family and group activities.
- > Be able to watch TV programmes undisturbed.
- > Feel motivated to play computer games with friends.
- > Attend sports events and be a real team player.

# How **Amigo** helps at **school** and at **home**

## Always putting voices first

Amigo uses Voice Priority technology to make speech come through clearly no matter how much distracting noise there is:

- > It cleans up the signal before transmitting it, to protect your child from noise.
- > It adapts to the teacher's voice to keep it audible and comfortable.
- > Whenever the teacher is silent, Amigo goes quiet to avoid picking up irrelevant sounds.

## A solution that **puts** your mind at rest

The Amigo receiver removes all doubt as to whether your child can hear clearly. The special light confirms that:

- > The hearing instrument battery is functioning and the receiver is on.
- > The transmitter is tuned in on the right channel.
- > The teacher's voice is coming through loud and clear.

## Technology that **builds confidence**

Amigo uses only first-class components. Highly resilient to wear and tear, it will build your child's confidence and support them as they progress from one learning level to the next. The Amigo transmitter:

- > Has shatter-proof glass that makes the device impervious to heavy impact.
- > Is rubber sealed, making it moisture resistant and safe to clean.
- > Runs the entire day on standard AA rechargeable batteries.

## A cool, **child** friendly design

Young people are extremely design-conscious, and the sleek and stylish design of the Amigo family is bound to catch their attention. Crafted in only the highest quality materials, Amigo solutions are:

- > As trendy and robust as any modern MP3 player or mobile phone.
- > Ergonomically designed to fit comfortably in the palm of a hand.
- > Easy to use for parents, teachers and children.

## Helping your child **focus on speech**

Inside the Amigo T10, directional microphones work like a special antenna to help your child focus on the voice they want to hear. With directional technology AND digital sound processing, Amigo:

- > Reduces noise coming from the sides and behind, so your child can focus on any speech coming from the front.
- > Shapes the sound to fit your child's needs making it easier for them to concentrate.
- > Automatically keeps the sound quality clear and comfortable.

## **Versatility** increases opportunities

The T10 transmitter is extremely easy to use: it can be hand-held, neck-worn or placed on a table, to make communication easier in the widest possible range of listening situations.

- > Amigo makes speech come through clearly, indoors, outdoors and even in the car.
- > In its "Surround Sound" program, the T20 is ideal for interacting with friends.
- > In its "Super Focus" program, the T20 captures only the voice of the person your child is facing.

With Amigo your child will sail  
through situations that previously may have  
seemed stressful.

**No matter which Amigo solution you choose, the superior performance will make a world of difference to your child. Amigo is quite simply the best learning and communication device you can get. Where children are concerned, we believe that nothing but the best will do.**

**FM made friendly**

# People first

We believe that it takes more than technology and audiology to create the best hearing instruments. That's why we put the individual needs and wishes of people with hearing loss first in our development of new hearing care solutions.
